# What is the better option?

HOSTED VS ON-SITE

Little or no upfront investments in hardware

Recurring monthly fees but no ownership

Monthly costs with additional fees

Limited customization functions

Traffic runs on provider's network

Can compromise quality

System updates and modifications are at the discretion of the provider.

Initial setup and hardware cost

No recurring hosting fees ownership of the system

**Initial setup cost but running costs are very low**

Greater control over customization and bundles

Running on your infrastructure

Results in better Quality of Service (QoS)

Total control over updates and security

ON-SITE VS HOSTED
